

phonegap

PhoneGap is a software development framework by Adobe System, which is used to develop mobile applications. To develop apps using PhoneGap, the developer does not require to have knowledge of mobile programming language but only web-development languages like, HTML, CSS, and JScript.

Prerequisites

It is mandatory that you have knowledge of HTML, CSS and JScript to create website that you might want to put on App. No other programming language is required to use PhoneGap.

The architecture of a mobile device is similar to that of a computer system. It has custom built hardware, firmware, and operating systems.

From a developer's perspective, an app should have the following items included in its package —

- Configuration files(config.xml)
- Icons for app
- Information or content (built using web technologies)

Configuration

```
<?xml version = "1.0" encoding = "UTF-8"?>
```

```
<widget xmlns="http://www.w3.org/ns/widgets" xmlns:gap="http://phonegap.com/ns/1.0" id="com.tutorialspoint.onlineviewer" version="1.0">
```

```
<name>Tutorials Point</name>
```

```
<description>
